
Professor Muhammad H. Zaman is Associate Professor and Associate Chair of Biomedical Engineering at Boston University. His lab focuses on developing new experimental and computational technologies for high value healthcare problems in the developing world. He has published over 80 book chapters, articles and monographs. Technologies developed by Prof. Zaman are in various stages of implementation in multiple African countries.

Additionally, Prof. Zaman is actively involved in bringing high quality engineering education in the developing countries. He is currently involved in setting up the first biomedical engineering departments at various African Universities in Kenya, Zambia, Uganda and Ethiopia. He is also a member of the technical committee of the UN Economic Council on Africa (UNECA) and co-Director of the UNECA biomedical innovation program. He has won numerous awards for his research, teaching and education outreach activities from IEEE, FEBS, ASEE and other international organizations. His current research is supported by NIH, NSF, USAID, UNECA, CIMIT, Gates and a number of other private foundations. He is a regular contributor on issues of innovation for the Huffington Post and Express Tribune (Pakistan).
